PROFESSIONAL SUMMARY

Java backend engineer with 6+ years building mission-critical systems for banking, fintech, retail, and government. Currently at NTT DATA delivering consumer-lending microservices for Banco de Crédito del Perú (BCP), Peru's largest bank, on Quarkus and Spring — including OAuth 2.0 / OIDC authentication and JWT-based entitlements for the bank's retail digital channels. Owns production services end to end: design, CI/CD, static security scanning, canary releases, and observability across AWS and Azure with Docker, Kubernetes, and Kafka. Advanced English; available for remote work fully aligned with US Central Time.

TECHNICAL SKILLS

Languages & Frameworks: Java 8/11/17, Spring Boot, Spring Security, Quarkus, REST & SOAP APIs, Node.js, Angular, TypeScript

Security & Identity: OAuth 2.0, OpenID Connect (OIDC), JWT (RS256), Spring Security

Cloud & DevOps: AWS (ECS, ECR, CodeCommit, Secrets Manager), Azure, Azure DevOps, Docker, Kubernetes, Jenkins, Git, Maven/Gradle, Fortify (SAST), Artifactory

Data & Messaging: Kafka, PostgreSQL, MySQL, SQL Server, Oracle PL/SQL, MongoDB, JPA/Hibernate

Observability: Elasticsearch/Kibana, Grafana

Testing: JUnit, Mockito

Practices: Microservices & BFF architecture, canary releases, CI/CD, Camunda BPM, Scrum/Kanban, Jira

PROFESSIONAL EXPERIENCE

Lead Engineer — NTT DATA Europe & Latam

Oct 2024 – Present

Client: Banco de Crédito del Perú (BCP) — Peru's largest bank · Digital Channels Tribe

- Build and operate 4 production microservices across BCP's consumer-lending journey — loan offers, disbursement, overview, and repayment — within a cross-functional squad of 6 (backend, frontend, QA automation, shared SRE) in the Digital Channels tribe.
- Design and build Quarkus and Spring services in a layered API architecture: experience-layer BFFs for the loan overview and payment flows, backed by business services for loan offer generation and customer access entitlement.
- Implement authentication and authorization with OAuth 2.0 and OpenID Connect, issuing RS256-signed JWTs carrying custom OIDC claims to drive per-customer entitlements across the retail digital channels.
- Own the delivery pipeline end to end — Jenkins CI/CD with canary releases, Fortify SAST gates, and Artifactory — deploying to production every other day in a regulated banking environment.
- Ran load and performance testing on the loan overview service, tuning horizontal scaling and CPU resource allocation to certify throughput ~37% above the platform's capacity requirement.
- Build Elasticsearch/Kibana and Grafana observability for service health and production incident response.
- Review peer code and author technical documentation, applying the bank's internal standards for security, performance, and maintainability.

Senior Developer — Whiz / 10Pearls

Aug 2023 – Sep 2024

Client: Elektra (Mexico) — supplier portal for one of Mexico's largest retailers

- Owned the order and shipping microservices of Elektra's supplier portal end to end, from design through production support.
- Built Java microservices on AWS ECS with Docker and Kubernetes, using ECR, CodeCommit, and Secrets Manager.
- Implemented event-driven flows with Kafka and persistence across MySQL and MongoDB.
- Integrated the portal with the VTEX commerce platform, using REST APIs for catalog and order synchronization and webhooks for purchase-order status updates.
- Developed Angular features for the portal frontend within a distributed international team.

Earlier Experience

2020 – 2023

Java/Spring Boot engineer across payments, government, healthcare, and enterprise modernization

- **Redeban (Colombia) — payment processing**, via MDP Consulting: built an e-commerce analytics dashboard with Java, Spring Boot, and Angular on AWS.
- **MINCETUR (Peru) — VUCE 2.0**, via G&S: built modules for Peru's national single-window platform for foreign trade, using Java, Angular, and PostgreSQL, with business process workflows in Camunda BPM and containerized services managed through Azure DevOps.
- **Hospital Belén de Trujillo**: built hospital information systems with Java/Spring Boot over Oracle PL/SQL and SQL Server, exposing REST and SOAP APIs.
- **NEKSYS Servicios Empresariales**: contributed to an architecture modernization initiative migrating legacy systems to Spring Boot microservices with Kafka, Docker, and Kubernetes on AWS/Azure, integrating Salesforce and Oracle PL/SQL.

EDUCATION & CERTIFICATIONS

B.S. in Computer Systems Engineering — Universidad Privada del Norte, Peru (2022)

- Microsoft Certified: Azure Fundamentals (AZ-900) — Microsoft (2025)
- GitHub Foundations — GitHub Certification Program (2026)
- PCEP – Certified Entry-Level Python Programmer — OpenEDG Python Institute (2021)

Languages: Spanish (Native) · English (Advanced — professional working proficiency)
